

M1 Design Feedback

UML Syntax (5/5)

-Very well done!

UML Substance (5/5)

-Items probably don't need to keep track of what room they're in if their location's being tracked by Room (or vice-versa), otherwise you'll need to update this information in two places for potentially little benefit.

-Aside from that I can hardly think of anything to suggest - you've done an excellent job here.

Testing Plan (10/10)

-Clear inputs and outputs, all methods supported including constructors, exceptions checked, this is also excellent!

UML Updates:
